

SONY

PVM-X Series

Show your true colors.

PVM-X Series professional monitors reveal every colorful detail with enhanced precision and accuracy.

Whether you're creating content on-set, on location, in a truck, broadcast studio, in the field, or edit suite, you want a monitor that you can trust to display the picture in its truest sense.

Presenting our PVM-X Series professional monitors that deliver stunning 4K, HDR, and HD images with the precision, accuracy, and consistency inherent in our TRIMASTER® processing architecture. Offering practical tools such as internal scopes, quad view display, 3D LUTs, and VPID support, the PVM-X Series of 18", 24", and 32"* monitors share the same colorimetry as our flagship Master Grading monitor – the BVM-HX310 – ensuring color consistency from production to post.

Ideal for diverse applications, the flexible PVM-X Series meets your 4K, HD, HDR, or SDR display requirements and exhibits accurate and stunningly bright images.

When paired with our new PVML-HSXL, HDR to SDR conversion license, the PVM-X Series monitors are given enhanced capabilities – enabling color space and resolution conversion directly in the monitor. Support for LUT color conversion and the ability to output converted images for distribution to other monitoring stations are just more resounding benefits that make the PVM-X Series monitors the quintessential choice for production teams.

TRIMASTER **4K** HDR

*The PVM-X3200 is planned to be available in October 2021.

**Screen image simulated.

The PVM-X Series professional monitors provide the benchmark for consistent image integrity.

Key Features & Benefits

Super-bright 4K HDR

High-resolution (PVM-X: 3840x2160), HDR images with 1000-nit brightness ensures that you see every detail for accurate frame composition and fine focus detail.

Color Match to BVM-HX310

The PVM-X Series monitors share the same colorimetry as our flagship BVM-HX310 Master Grading monitor, ensuring that the colors seen on set match those in post.

Quad View Display

Display four independent HD signals on a single monitor, each with different LUTs and EOTFs. Compare looks or display four different feeds for space savings.

12G/6G/3G/HD—SDI

Convenient connections, including 12G SDI, enable 4K connections using a single cable.

3D LUTs

Easily load and save 3D User LUTs directly in the PVM-X to get the creative feel of your content while you're shooting.

4K/HDR Scopes

Ensure accuracy with PVM-X Series' internal 4K/HD waveform and vector scopes with HDR/SDR scales.

Portable & Rack-Mountable

The 18" and 24" PVM-X Series monitors are durable, lightweight, and support DC 24V battery operations, making them ideal for fieldwork. Both models are also rack-mountable and suitable for truck and studio applications.

Improved User Interface

Enhanced On Screen Display (OSD) makes operation more intuitive. The new menu design enables quick and intuitive adjustments, and settings can be password protected against inadvertent changes.
